Build an MS Access Database to Help the State Department Track Career Development

Project Title	Build an MS Access Database to Help the State Department Track Career Development
Project Summary	The Career Development Division at State is looking for a highly motivated, tech savvy intern to create an intuitive, user-friendly Microsoft Access database that can be used to run queries and generate reports on a range of career data.
Country	United States

Project Description

The Career Development Division at State is looking for a highly motivated, tech savvy intern to create an intuitive, user-friendly Microsoft Access database that can be used to run queries and generate reports on a range of career data. This is a fantastic opportunity for IT Students to sharpen their database development skills, while also learning about career development and training for the State Department professionals who tackle the U.S. government's foreign policy priorities.

Required Skills or Interests

Skill(s)
Data visualization

Additional Information

Must be familiar with relational database development and structured query language (SQL).

The Career Development Division in Human Resources at State develops, implements, and administers career and professional development programs, and provides career counseling services and resources to Civil Service employees and Foreign Service family members.

Language Requirements

None
